noorelahialishibly.com

Cybersecurity Analyst with a focus on vulnerability discovery and offensive security research. Experienced in reproducing complex CVEs and conducting large-scale network assessments (1,200+ IPs). Skilled in developing AI-integrated security tools and translating technical findings into structured, framework-driven reports.

EDUCATION

B.Sc. in Software Engineering	Daffodil International University	2025
Major: Cybersecurity	Coursework: Network Security, Cryptography, Secure Software Engineering	CGPA: 3.74/4.00

PROFESSIONAL TRAINING

Network Security Assessment Workshop	Grameenphone Ltd. Supervisor: Mohammad Shahadat Hossain (Principal Security Architect)
• Took part in a structured network security assessment workshop inside a live enterprise environment • Ran TCP/SSL vulnerability analysis across 1,280+ IPs — flagged hosts running deprecated TLS (v1.0/1.1) and exposed to the SWEET32 attack • Mapped the attack surface using Masscan, Nmap, and SSLScan, pulling out 152 live hosts from the scan results • Wrote Bash scripts to automate batch scanning and speed up vulnerability triage across the IP range	

CYBERSECURITY PROJECTS

CVE-2026-24061 — Telnet Authentication Bypass	noorelahialishibly.com/blog
• Set up a full lab on Debian 10 and Kali Linux to reproduce the Telnet auth bypass from scratch • Traced the vulnerability to its root cause, documented the complete attack chain, and published a detailed writeup • Wrote a Bengali-language breakdown of the finding to make the research accessible to local security learners	

Tech: Kali Linux, Debian 10, Telnet, Network Protocol Analysis

CVE-2025-29927 — Next.js Middleware Bypass Lab	github.com/Shibly6/vulnerability-labs
• Dug into the Next.js middleware routing logic, reproduced the CVSS 9.1 auth bypass, and built a dedicated vulnerable lab around it • Walked through the full exploit step by step using Burp Suite Pro and documented everything — attack chain, PoC, root cause, and fix • Wrote up the mitigation strategy in a way that would be useful for developers, not just security folks	

Tech: Next.js, Burp Suite Pro, HTTP Protocol Analysis, Web Security

LiteRecon_AI — AI-Powered Reconnaissance Platform	github.com/Shibly6/LiteRecon_AI
• Tied together 11 security tools (Nmap, SSLyze, Feroxbuster and others) into a single full-stack recon platform • Added a local LLM layer via Ollama for AI-assisted finding triage, plus automated PDF report generation	

Tech: Python, FastAPI, React, Ollama, Nmap, Kali Linux

RESEARCH EXPERIENCE

Cloud Security Research	Daffodil International University Supervisor: Dr. Imran Mahmud (Dept. Head, Sr. IEEE Member)
IaC Misconfiguration Detection	
• Built an unsupervised ML framework from scratch to catch Terraform/AWS S3 misconfigurations that rule-based scanners tend to miss • Got to 94% ROC-AUC with an Autoencoder and 94.9% PR-AUC with Isolation Forest, working across 22 hand-engineered security features • Designed an explainable output layer so the findings could plug directly into a CI/CD pipeline as a security gate	
Technologies: Python, scikit-learn, Terraform, AWS S3, Pandas Paper pending IEEE publication	

TECHNICAL SKILLS

Security Tools	Burp Suite Pro, Nmap, Masscan, Wireshark, SSLScan, Nikto, Gobuster, Feroxbuster, SQLMap
Web Security	OWASP Top 10, SQL Injection, XSS, IDOR, Authentication Bypass, SSRF, Business Logic Flaws
Network Security	TCP/IP, TLS/SSL Analysis, Vulnerability Assessment, Firewall Fundamentals
Platforms & OS	Kali Linux, Parrot OS, Ubuntu, Windows
Programming	Python (Security Scripting), Bash, Java
Frameworks	OWASP Testing Guide, MITRE ATT&CK, PTES
Cloud	AWS S3, Terraform (Security Auditing)

ADDITIONAL INFORMATION

Languages	Bengali (Native), English (Fluent)
Operating Systems	Kali Linux, Parrot OS, Ubuntu, Windows
Strengths	Analytical Thinking, Problem Solving and Continuous Learning
